EXPERIENCE

Software Engineer | Microsoft

July 2025 - Present

Software Engineer · Kotlin, Java, Android, AI Agents

- Built the end-to-end **relevance-ranking system** for Catchup across **6 architectural layers**, enabling users to surface high-priority unread conversations based on relevance.
- Built a **memory profiling and regression dashboard** for critical navigation flows, enabling automated detection of memory anomalies and recently catching a **30 MB regression** before broader production impact.
- Designed and implemented **source-aware telemetry and explicit failure reporting** for content-loading and badge-update flows, enabling faster production issue isolation and root-cause analysis.
- Built an **undo mechanism for Catchup cards** that defers previous-card state updates until the next user action, ensuring consistent state transitions across the feed.
- Resolved **accessibility and UX issues** across focus visibility, offline handling, presence, and participant counts, improving the consistency and accessibility of Catchup experiences.

Software Engineer Intern | Winter Intern

Cisco · Python, AI, Networking, NodeJS

Jan 2025 - Jun 2025

- Built a **Windows productivity and grammar tool** with slash-command workflows for paraphrasing, note-taking, grammar correction, and other text transformations, enabling users to access multiple capabilities
- Developed a **Cisco switch command-execution tool** to run network commands directly on switches, automating repetitive operational workflows and simplifying network-device interaction.

Software Engineer Intern | Summer Intern

Microsoft

July 2024 - August 2024

- Restored a business-critical email delivery service by diagnosing and resolving cross-system infrastructure and configuration issues.
- Led the **SMTPv1 to SMTPv3 migration**, onboarding certificates across production and non-production environments to strengthen email security and reliability.
- Built **ECS-based progressive rollout and rollback controls**, validating the missed-activity email flow before scaling deployment to **100%**.
- Delivered production email-service changes and coordinated **certificate whitelisting and tenant onboarding** across partner teams, restoring a business-critical notification flow.

Cisco

May 2024 - Jun 2024

- Automated the entire process of posting **9800-CL** on **AWS** using **Jenkins**
- Streamlined the posting process to minimize the manual input required from various teams
- Co-ordinated with the **CSR** team to understand the end-to-end flow of their automation
- Debugged the **create_ami, groovy, aws_image_build.py** script, added required parameters to make them functional

OPEN SOURCE

The Palisadoes Foundation | [Github](#) | Python, HTML, Dart, Typescript, Javascript

March 2023

- Improved **error handling** for UI components by rendering suitable error prompts upon error conditions
- Enhanced code quality by writing more than **10** test cases using **Jest** which increased the code coverage upto **70%**
- **PR-1 Link** | **PR-2 Link**

EDUCATION

Indian Institute of Information Technology, Gwalior

November 2020 - July 2025

Integrated Bachelors and Masters in Information Technology

Gwalior, India

PROJECTS

Suit-Up | NodeJS, ReactJS, Firebase, AI

- Developed a full-stack e-commerce platform with **Firebase authentication, wishlist/cart functionality, and Stripe** payment integration.
- Built an **AI-powered fashion recommendation system** that suggests personalized outfits based on user preferences, occasion, and selected clothing items across **50+ products**.

SKILLS

Languages: Java, JavaScript, Python, SQL, C++

Concepts: Microservices, Distributed Systems, Low Level Designs, AI-Assisted Development
